

PlateCrafters

is proud to offer

DUPONT Cyrel[®] *FAST*

creo[™] **Thermoflex Mid II**
Computer Direct to Flexo Plate

PLATECRAFTERS DIGITAL FLEXO PLATE DEPARTMENT is a team of expertly trained Platemakers committed to providing our customers with the highest quality plates possible. Our Creo Thermoflex Mid II CTP unit is capable of producing all digital flexo plates including our Cyrel FAST plates up to 40" x 47". Our DuPont digital Cyrel FAST plates imaged on our Creo Thermoflex Mid II CTP are superior in quality to any analog plate by reducing dot gain on press, and allowing printers to hold a smaller dot. They are also unmatched for allowing smoother highlight blends with printed dots as low as 1% at 200 lpi. Dupont digital Cyrel FAST plates can hold even the finest reverses open, while printing line work or process work. Our Dupont digital Cyrel FAST plates imaged on our Creo Thermoflex Mid II CTP print noticeably cleaner, require fewer washings and will last longer than a conventional flexo plate. Our digital Cyrel FAST plates will have your presses running faster, shortening turnaround time and increasing your pressroom capabilities. Our Creo Thermoflex Mid II CTP combined with our DuPont digital Cyrel FAST plates will deliver quality to your press that far exceeds the expectations of even the most discriminating customer.

BETA FLEX ANALYZER is a desktop instrument used by Platecrafters for analysis of dot area, screen ruling, dot size, dot diameter, edge factor, ink void factor, and more on halftone films, photopolymer plates, halftone proofs, and press sheets. Platecrafters can monitor halftone changes from film or digital plate all the way through to the press. The Beta Flex 334 allows our plate technicians to achieve constant screening quality control and can provide press and proof verification.

FINGERPRINTING press plates is a service Platecrafters supplies to our customers. We will provide you with a set of plates, information sheets, and fingerprint test results. This service is to help our customers achieve the highest quality press results and eliminate any loss of valuable production time. We also supply color management fingerprinting for digital proofs. Please refer to the Dupont Chromopro Epson 7800 information sheet.

RUBBER PLATES are still very much in use. Our rubber plates are found in many leading wide web converters throughout the country. By maintaining a staff of skilled craftsman, we continue to produce a superior rubber printing plate. When multiple plates of the same image are required, rubber is still the most economical alternative.
